

Penthouse Collection - Dimmers

Standards, Approvals & Directives

Comply with
BS-EN 60669-2-1
EN-55015
CE Marked

Description

Rotary dimmers, suitable for use with LED and resistive load lighting dependant on module. These are push on/push off switch dimmers which act at any pre-selected brightness setting. They have two-way switching that may be used with a normal two-way switch elsewhere or intermediate switch. The secondary switch will not act as a dimmer but only on/off

Availability

We recommend that Single section plates should not exceed 500 watts load and Twin section plates should not exceed 1000 watts load. Failure to comply with this may result in overheating of dimmer modules and units themselves.

Modules

RTD120—LED dimmer 5-120W
RLD300—resistive load 40-300W
RAD—1-10V Controller
ROO—on/off module (dummy dimmer)

For dimensional/technical information on modules please see individual data sheets.

Finishes

All finishes are individually inspected by the Wandsworth Group, a sign of the high standard we have set for The Penthouse Collection.
