GASHOLDERS CASE STUDY

GASHOLDERS
LONDON

Since 1904, we have been designing and crafting beautiful functional electrical accessories to enhance interiors and architectural wonders around the world. This unique experience and knowledge is harnessed in **The Wandsworth Journey**, a journey in which we assist and guide you from design concept to completed creation. Beginning and ending with British innovation, technical expertise, and peerless craftsmanship and where every single plate, socket, switch, fixture and fitting is hand-designed and manufactured on home shores to impeccable industry standards.

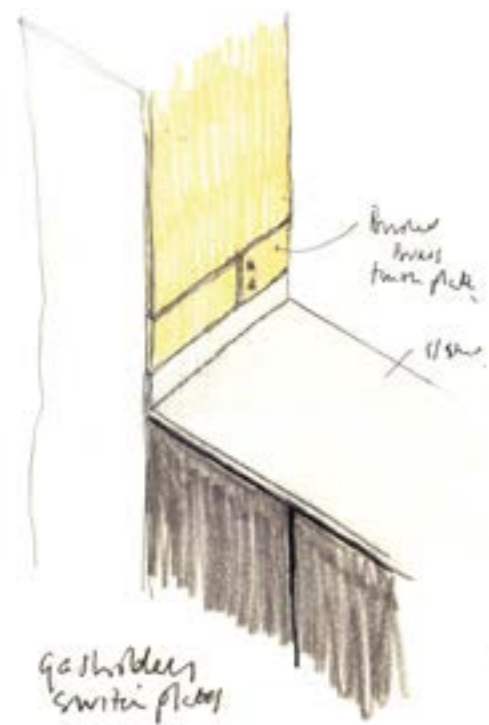

A key element of the journey is our capability to bespoke design beautiful solutions, which ensures unique design requirements are not compromised as we have both the technical artistry and manufacturing skills to match any design vision.

The bespoke service was utilised by Jonathan Tuckey Design & The Kings Cross Central Limited Partnership at the Gasholders, Kings Cross, a unique development of 145 Apartments and Penthouses within refurbished Grade II listed cast-iron gas holder guide frames. Drawing inspiration from the unique architecture and position, the design team followed a concept of 'industrial refinement' with materials that would reinforce the Gasholders past but also enrich the senses.

The in-house design and manufacturing service customises plates to your exact specification, shape, size and interior configuration. Whatever your needs, we will deliver the ideal solution and all part of the Wandsworth Journey – 100 years in the making.

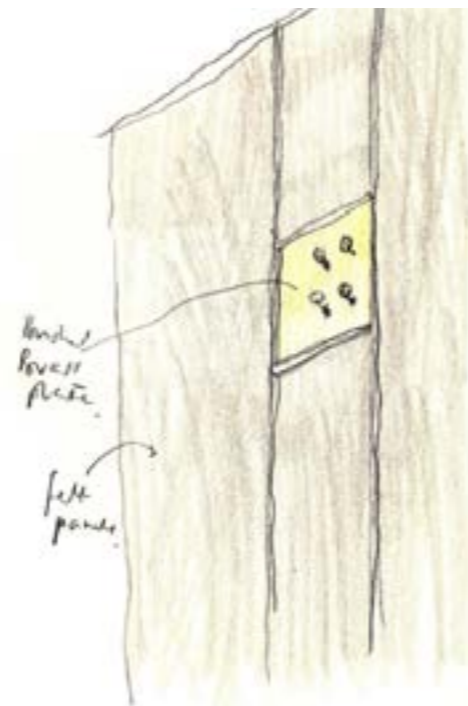

DESIGN CHALLENGE 1

Two bespoke plates designed for the customised kitchen, with one that bends around a pillar to allow for smooth continuation of the design. The plates provide 3 sockets plus a toggle and dimmer switch. Originally designed in Brass the finish was switched to Matt Black to mirror the controls panel on the other side of the pillar, helping provide a strong contrast to the brass and stainless steel worktops.

DESIGN CHALLENGE 2

To match the electrical accessories to the bespoke brass door furniture, we developed a tumbled brass finish, that elegantly sits with the door furniture. The bespoke light switch design has 3 toggles and one dimmer with a black ring around one of the toggle to inform residents that this one controls the blinds. The Matt White plates use a brass ring, following the understated design style to indicate the blind control and beautifully blend in with the white look.

DESIGN CHALLENGE 3

Extra wide plug sockets were designed to mirror the width of the bespoke light switches. With a unique configuration of 3 toggles, with the blind control indicated by a different coloured ring plus a single dimmer. The tumbled brass version matches the light and door furniture handles within the room.
